# A Dot-to-Dot Spider Web

**Objective** Describe how a spider makes an orb web by completing a dot-to-dot drawing.

**Directions** First connect the dot at letter **a** with the all the dots from **b** to **n**. These are the guide lines that hold the web in place. Next, draw a line from the spider to the dot at numeral **1** to the next dot, until you reach the dot at numeral **40**.

When the spider has finished weaving the first string, she turns around and weaves many more strings going back to the outside. This second string is sticky so it can catch insects.
